

Series 2000 firmware version 1.8.1 (WSM version 3.6 or higher)

The WSM software is required for the firmware update:
Choose from the WSM menu: "Applications > Firmware Update"

Requirements

Wireless Systems Manager (WSM)

Version 3.6 or higher

New in this firmware version

Support for Aw+ range

Firmware Installation Troubleshooting

Encrypted firmware file

The firmware file seems to be encrypted / password protected:

If you download the SENNPKG firmware file, it will be saved/opened as a ZIP-file instead. If you then try to open the file you will get the message that it is encrypted and you need a password to open it.

Solution

If your SENNPKG-file is opened with an archive software or saved as a ZIP-file, rename the file: replace "zip" with "sennpkg".
