

Firmware Version 6.04 // Release Date: 2018-03-22

To update the Firmware to version 6.04 the system must have the Firmware 5.04 or higher installed. If you have no online access, please download the tcw firmware file below and select manually.

New features

- Priority Bluetooth Pairing mode with automatic reconnect
- Individual mute mode

Note: The activate of the new modes is explained in the updated Quick Guide available for download here: [<link einfügen>](#)

Changes

- Standby mode activation now after 45min (was 5min) of idle mode
- Sleep mode activation now after 60min (was 30min) of idle mode
- Minor bugfixes

Note: The TC-W Software Updater will automatically use the latest firmware file from the update server. If you have no online access, please download the .tcw firmware file below and select manually.
